WIRE FORMATION

Find Inspiration...
Practice with
Cursive letters...
Work with tools...
SAFETY FIRST!

PRACTICE:

We will initiate our experience with something simple to best understand the way wire works, bends, forms, and interacts with our hands and with our tools. Safety is a must, be careful and be aware of your surroundings. *First up, a flat 2D word formed with Cursive Letters from one wire!*

RESEARCH:

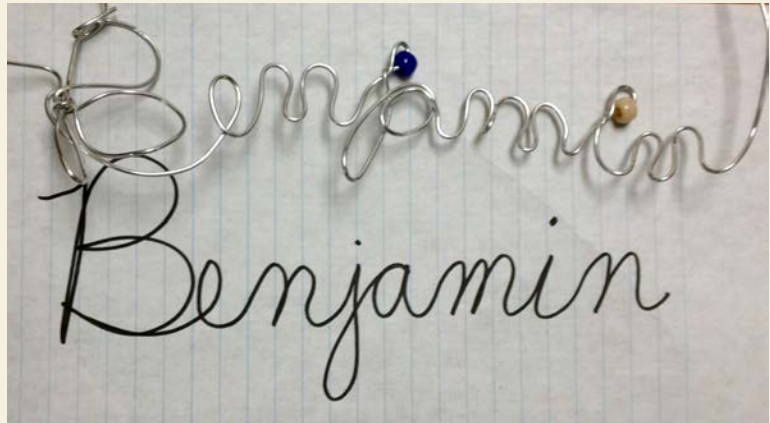

Look up visual references through the internet or magazines. We will next begin drawing contours of our subject matter. Your project may depict a person, animal or object. The photographs and drawings will be your references.

CONSTRUCTION:

Using our references and tools, 3D Construction of the wire armature will begin. Strength for supportive structures can be reinforced through binding multiple wires together. *Remember, with two people to a team, you will still be required to create TWO sculptures. Teamwork helps provide extra hands to such a complicated project.*

SAFETY:

Safety is crucial as it is when always working with hand tools. It is imperative that you curl the tips of your wires before beginning any sculpture. Wire can poke, scratch and rip skin and eyes!
