WORBLA!

Worbla is a Polythermal-plastic that is re-shapable with heat and hardens when cool

GOAL: To create a 3D costume piece or prop from Worbla that you can wear or use based on a character from movies, games, TV, anime, etc.

RESEARCH:

Look up the Pinterest album containing Sculpture: Worbla! There are various projects that most often deal with fantasy costumes or props used commonly by “Cosplay” designers and actors.

CONSTRUCTION:

This project is a one of the hardest projects and that's why we saved it for last! You will have to plan a 3D sketch from paper based on your idea. You will then have to utilize the soft foam paper to create patterns to serve as the basic shape that the worbla will wrap around.
